- HackerRank Problem Solving (Intermediate)
- HackerRank Javascript (Basic)
- HackerRank Javascript (Intermediate)
- HackerRank Node (Basic)
- HackerRank React (Basic)
- AWS Cloud Computing Summer Training Course 2023

PROJECTS

Admin Dashboard
This is my final semester project that has been developed using Refine, Ant Design, and GraphQL. In this app, I have integrated seamless onboarding with secure authentication. The app also includes dynamic home page with real- time metrics, along with full CRUD capabilities and a kanban board.

Contact Manager Application
This application was built to keep contacts secured with a unique encryption using hashing of password and contacts. I implemented it using Node Js and Express Js, and Mongo DB.

B2B Fintech Invoice Management Website
Full stack website with integrated AI feature. I built it using React js, Java Servlet, SQL, and Python and Flask.
